## Using Weather Forecasts with Iridium Mail & Web for Android & iOS

Lu Parente - 2019-12-31 - in [Iridium GO!](#)

Follow the instructions below for assistance on how to configure and download weather forecasts using the Iridium Mail & Web application for Android & iOS devices.

**Note:** Menu options may vary based on the Android or iOS device you are using. Please ensure your mobile device is connected to the Iridium GO! WiFi hotspot before proceeding with the instructions below.

### Step 1: Configure Weather Forecasts

1. Open the **Iridium Mail & Web** application.
2. Select **Settings** followed by **Weather**.
3. Select **Locations** to view a list of configured locations.
4. Select **+** or **Add another location** to add a new location.
5. Manually enter the location details or select **Select Airport/By airport code**.
  - To manually enter the location: Enter the name, latitude and longitude.
  - If entering by airport: Search for the airport location, select your desired location, and press **Save**.
6. Once you've saved your location, go back to **Weather Settings**.
7. Go through the list of **Weather Settings** to enable or disable the weather parameters of your choice.

### Step 2: Download Weather Forecasts

1. Connect your mobile device to the Iridium GO! WiFi network.
2. On the Iridium GO! pressing the left soft-key.
3. Continue to press the left soft-key until Internet is highlighted then press **Select**.
4. Start internet connection? will be displayed, select **Yes**.
5. Open the Iridium Mail & Web application.
6. Select **Weather**.
  - For Android, select "Refresh" followed by **Fetch Weather**.
  - For iOS, select **Connect**.
7. Once the download has completed, you will have the latest weather forecast.
